Introduction

This is a web service enabling clients to generate animated mobile content based on stick text emotions and predefined themes and layouts

Registering

Prior to using it, the service requires registration. You will be given a user and a password. Please contact bd@actelme.com for new setups and registrations.

How it works

Operators (or service providers) will collect SMS data and will submit them to our service. Animated texts will parse the SMS text and will generate a mobile compatible animation for the operator (or service provider) will send to the end user.

Operator test

This interface is for debugging. The switch is in the “return” variable set to “html”.

Paste the following in your browser

[http://tru1.trufields.com/gif/service.php?user=username&pwd=password&return=html&msg=Hello :\)
how are you? |-\) it was fun seeing you ;\)](http://tru1.trufields.com/gif/service.php?user=username&pwd=password&return=html&msg=Hello :) how are you? |-) it was fun seeing you ;))

The page will include a link “Click to see” that will lead you to the result.

Operator API

Using a HTTP client library, you should call the following URL: (return=xml)

[http://tru1.trufields.com/gif/service.php?user=username&pwd=password&return=xml&msg=Hello :\)
how are you? |-\) it was fun seeing you ;\)](http://tru1.trufields.com/gif/service.php?user=username&pwd=password&return=xml&msg=Hello :) how are you? |-) it was fun seeing you ;))

The system will return the following answer

```
<?xml version="1.0" encoding="UTF-8" ?>
<animation>
  <access>0</access>
  <type>gif</type>
  <reference>http://tru1.trufields.com/gif/users/9a7ea2d7-294e-47d8-9240-47f641a1495f/animation.gif</reference>
</animation>
```

XML interpretation

1. Access: result of your authentication
 - a. 0: success
 - b. Negative: Error
2. Type: type of the generated animation
3. Reference: the URL to download from

Emotions

We update our emotions library on demand. The following themes are available

MSN library
