Input protocol

3

Protocol	
URL	http://clients.actelme.com/MainSMS/push_Content.aspx

HTTP Parameters		
ASPX Page	push_Content.aspx	
Fixed Input <i>(Please Find on the last page all the required fixed details)</i>		
Dynamic Input		
SMS Parameters		
Receiver	Mobile number	Integer
Originator	Short code	Integer
Countryname	Country name (Check the below list)	Alphabetic String
Operatormname	Operator name (Check the below list)	Alphabetic String
ContentBody	Message Content	String
ContentTypeDetails	<ul style="list-style-type: none"> Unicode for UCS2 (Arabic) Text for English Wap for wap content 	Alphabetic String
ContentSubType	<ul style="list-style-type: none"> Smsreply (single sms reply) Smsbulk (Bulk campaign) Smsmtbilling (single MT billing reply) Wapreply (Wap reply) Wapbulk (Bulk campaign) Wapmtbilling (single Wap MT billing reply) 	Alphabetic String
username	XXXX	Alphanumeric String
Password	XXXX	Alphanumeric String
Contentid	Unique ID (SQL Based) EG : 06A839EF-6E7C-4D2F-B222-84EFB44EDF60 if possible on each process or normal unique id	Alphanumeric String

Return codes

Error Table		
Returned Values	Description	Type
Invalid Originator	Invalid short code	Alphabetic String
Invalid Receiver	Invalid mobile number	Alphabetic String
Invalid Countryname	Invalid or empty country name	Alphabetic String
Invalid Operatorname	Invalid or empty operator name	Alphabetic String
Invalid ContentBody	Empty message or invalid text	Alphabetic String
Invalid ContentTypeDetails	Empty ContentTypeDetails	Alphabetic String
Invalid ContentSubType	Empty ContentSubType	Alphabetic String
Invalid Contentid	Empty ID	Alphabetic String
Error Posting	Internal link error	Alphabetic String
ok	Message Sent Successfully	Alphabetic String

Requirements

1. For Arabic sms we support ucs2 characters. (Hex Code)
2. For English sms we support plain latin characters.

Output

The result is either starts with: ***Invalid (error) with error description*** or **ok** as keyword

Aggregators/mobile messaging aggregators: Entities that provide access to mobile operators. Often referred to as service providers, an aggregator connects to the mobile operators and through one connection to its clients, aggregates access to multiple operators.

Gateway/messaging gateway: This is a system that handles receiving and sending messages between other messaging entities. They provide the single point of access and implement the notions of queuing, retry failed messages and implementation of required communication protocols.

Large scale competition: Large scale competitions, often referred to as super promotions, are services that Actel specializes in. Large scale competitions are by definition services accessible by a large user base and generate big amounts of traffic.

VAS Promotion Systems: The system that implement the large scale competitions. VAS (Value Added Service) Promotion Systems refers to the application layer that Actel implements.

MO: Mobile Originating messages are messages sent by the user.

MT: Mobile Terminating messages are messages sent by Actel to the user.

Dialogue/MO-MT Dialogue: Represents a text based SMS dialogue that Actel's Systems holds with a user. A user sends an MO, Actel answers with an MT triggering the user to send another MO, thus establishing a dialogue with the user.

Base Bulks: Broadcasts to subscribers of the operators who have not yet joined the promotion.

Teaser Bulks: Broadcasts to subscribers who have joined the promotion and are being invited to play some more.

MO Inbound: The MO traffic that is sent to ACTEL by any peer.

MO Outbound: The MO Traffic that is sent from ACTEL to any other peer.

MT Inbound: The MT Traffic that is received by ACTEL from any peer.

MT Outbound: The MT traffic that is sent by ACTEL to any peer.

11

Submission, Hit, Transmission: These terms designate a single HTTP PDU sent from or to ACTEL

Annex 3 – MD5 encryption function

DISCLAIMER: Please be advised that the provided code samples are provided for your convenience. Use them at your own risk.

VB.Net

```
Public Function MD5Encrypt(ByVal EncString As String) As String
    'Variable Declarations
    Dim MD5String As String
    Dim EncStringBytes() As Byte
    Dim Encoder As New UTF8Encoding
    Dim MD5Hasher As New MD5CryptoServiceProvider
    'Converts the String to bytes
    EncStringBytes = Encoder.GetBytes(EncString)
    'Generates the MD5 Byte Array
    EncStringBytes = MD5Hasher.ComputeHash(EncStringBytes)
    'Create MD5 hash
    MD5String = BitConverter.ToString(EncStringBytes)
    MD5String = MD5String.Replace("-", "")
    'Returns the MD5 encrypted string to the calling object
    Return MD5String
End Function
```

Usage

```
Signature=MD5Encrypt("ClientPassword@" & smssender)
```

PHP

```
$Signature= md5("clientpassword@".$smssender);
```

Java

```
import java.security.MessageDigest;

public class Main {
    public static void main(String[] args) {
        try{
            MessageDigest digest = java.security.MessageDigest.getInstance("MD5");
            //Put in here the String that you want to has its MD5 sig
            String sig = new String("actel");
            digest.update(sig.getBytes());
            byte[] hash = digest.digest();
            String result = "";
            for (int i=0; i < hash.length; i++) {
                result += Integer.toString( ( hash[i] & 0xff ) + 0x100, 16).substring( 1 );
            }
            System.out.println(result);
        } catch (Exception e) {
            e.printStackTrace();
        }
    }
}

Annex 4 – Convert from UCS2 to Arabic (or UTF8) function

VB Script and VB.net :

```

Function Arabize(ByVal text As String) As String
    Try
        Dim thetext, char1, arabictext As String
        arabictext = ""
        thetext = text
        For i As Integer = 1 To Len(thetext) / 4
            char1 = Left(thetext, 4)
            arabictext = arabictext & ChrW(CInt("&H" & char1))
            thetext = Right(thetext, Len(thetext) - 4)
        Next
        Arabize = arabictext
    Catch ex As Exception
        Arabize = " invalid message"
    End Try
End Function

```

PHP 5

```

header('Content-Type: text/html; charset=UTF-8');
mb_http_output('UTF-8');
echo '<html><head>';
echo '<meta http-equiv="Content-Type" content="text/html; charset=UTF-8" />';
echo '</head><body>';

$UCS2 = "06230643062A064A064400200647064A0020062706440623064206480649";
$ucs2string = pack("H*" , $_REQUEST['ucs2']);
// $ucs2string = pack("H*" , $UCS2);
$utf8string = mb_convert_encoding($ucs2string , 'UTF-8' , 'UCS-2');
echo 'UTF8: '.$utf8string.'<br />';

echo '</body></html>';

```

Annex 5 – Convert from Arabic (or UTF8) to UCS2 function

VB Script and VB.net:

```

Public Function UniEnc(ByVal text As String) As String

    Dim i, j, count_char As Integer, nchar, hexval, arabicunicode As
String
    arabicunicode = ""
    For i = 1 To Len(text)
        count_char = count_char + 1
        nchar = Left(text, 1)
        hexval = Hex(AscW(nchar))
        If Len(hexval) < 4 Then
            For j = 1 To 4 - Len(hexval)
                hexval = "0" & hexval
            Next
        End If
        arabicunicode = arabicunicode & hexval
        text = Right(text, Len(text) - 1)
    Next
    UniEnc = arabicunicode
End Function

```

PHP 5

```

header('Content-Type: text/html; charset=UTF-8');
mb_http_output('UTF-8');
echo '<html><head>';
echo '<meta http-equiv="Content-Type" content="text/html; charset=UTF-8" />';
echo '</head><body>';

$bodyar = "الأقوى هي أكتيل";
$arr = unpack('H*hex', @iconv('UTF-8', 'UCS-2BE', $bodyar));
echo "UCS2 : ".$arr['hex'];
echo "<br><br>";

echo '</body></html>';

```
